Portfolio: <https://shxhid.is-a.dev> | Work log (Notion):
<https://app.notion.com/p/3876869e8cbe81d1bb88fd93b15c6009>

Professional Summary

Software developer building and running production systems for an industrial distribution business across the UAE and Saudi Arabia. Shipped 24 Shopify theme builds to production on a 200,000-product catalogue, including a ground-up rebuild (Vision) and a full redesign (Datum) that has been the company's live theme since September 2026. Build custom Shopify apps in the Partner Dev Dashboard, Node.js services deployed on Railway, and an MCP-based AI shopping agent on the Anthropic Claude API that searches the full catalogue and completes checkout in chat. Comfortable across the whole path: interface, API, deployment and production debugging. A dated, linked record of every project, feature and working day is published on Notion.

Key Achievements

- Shipped 24 Shopify theme builds to production for a 200,000+ product catalogue; current theme (Datum) live since September 2026.
- Built a metafield-driven catalogue hierarchy powering 270+ collection pages and 120+ subcategories with no per-collection hardcoding.
- Rolled out a Shopify Search and Discovery filter system across 120+ collection pages.
- Deployed an AI shopping agent (Claude API, Model Context Protocol) in production since February 2026.
- Imported approximately 40,000 products and corrected 4,974 broken image URLs.
- Built a shipping-rate proxy quoting 9+ carriers live in the cart with zero credentials exposed to the browser.
- Launched 4 brand landing pages on Google Ads traffic and a second regional storefront for Saudi Arabia.

Technical Skills

- **Shopify:** Liquid, Online Store 2.0, theme architecture, custom apps (Dev Dashboard), theme app extensions, app proxies, metafields, Shopify Search and Discovery, Storefront GraphQL API, Admin REST API, Rapid Search, Matrixify, catalogue architecture
- **Languages:** JavaScript, TypeScript, Python, Liquid, SQL, HTML, CSS
- **Front End:** React, Next.js, React Router, Tailwind CSS, semantic HTML, CSS architecture, responsive design, accessible UI, UI/UX design
- **Back End:** Node.js, Express, FastAPI, REST API design, GraphQL, OAuth, PKCE, token lifecycles, SSE streaming, webhooks, caching, rate limiting
- **AI Engineering:** Anthropic Claude API, Model Context Protocol (MCP), MCP servers and tool design, agent architecture, prompt engineering, RAG, OpenAI, Gemini
- **Databases:** PostgreSQL, Prisma, MongoDB, Supabase
- **Infrastructure and DevOps:** Railway, Vercel, AWS S3, Docker, CI/CD, Git, GitHub, Linux, secret management, bot and traffic mitigation, robots.txt, rate limiting
- **Analytics and Growth:** PostHog, technical SEO, Google Ads audits, landing page optimisation, n8n workflow automation

Professional Experience

Software Developer, Shopify and AI

Creative Industrial Automation | Remote, UAE team | December 2025 - Present

- Sole developer on a 200,000-product Shopify storefront (creativeautomation.ae); shipped 24 theme builds to production, including Vision, a ground-up rebuild approved and deployed within days of first review, and Datum, a full redesign of every customer-facing page live since September 2026 with all existing links and integrations preserved.
- Own theme architecture end to end in Liquid, JavaScript and CSS: three-level metafield-driven navigation, collection and product templates, part-number search across 25,001 indexed parts, filters, pre-order system, cart and technical SEO.
- Rebuilt collection filtering on Shopify Search and Discovery across 120+ collection pages (brand, series, dimensions, mounting type, price, accessory type, depth), with a redesigned search-results filter bar and row and tile product views.

- Build custom Shopify apps in the Partner Dev Dashboard using app proxies, theme app extensions and OAuth session tokens, with the Node.js services behind them deployed on Railway.
- Designed, built and deployed an MCP-based AI shopping agent on the Anthropic Claude API, integrating Shopify Storefront and Customer MCP servers over JSON-RPC; live in production since February 2026 and fronted by the TIA AI Product Search page launched in September 2026.
- Built an Express proxy service that quotes live carrier shipping prices in the cart while holding all third-party API credentials server-side, and maintained it through two full theme changes.
- Traced heavy US bot traffic exhausting the site-search session plan; worked with the vendor to exclude bots and reset usage, then added robots.txt rules, rate limits and session timeouts against bot and data-centre traffic.
- Launched a second regional storefront for Saudi Arabia and designed its new theme; built four quote-first brand landing pages (IFM, Siemens, SMC Brand, SMC Distributor) that receive the company's Google Ads traffic, and a free maintenance-planning toolkit page with a seven-sheet Excel download.
- Diagnosed and resolved production-only failures including an OAuth token 401 loop, a Shopify app security block, shop-domain resolution behind an app proxy and a third-party pre-order app script injection resolved with vendor support.
- Handle deployment, production debugging, PostHog analytics instrumentation, Google Ads audits and internal workflow automation.

Machine Learning Engineer, Intern

CodeAlpha | Remote | March 2025 - May 2025

- Built and deployed credit-scoring, handwritten character recognition and disease-prediction models from preprocessing through deployment using Python and scikit-learn.

Frontend Developer, Intern

CodeAlpha | Remote | September 2024 - October 2024

- Built responsive React components and carried out performance refactoring on existing interfaces.

Full-Stack Developer, Intern

SmartED Innovations | Remote | March 2024 - July 2024

- Built Next.js, Node.js and FastAPI applications with cloud database integration and CI/CD pipelines.

Projects

Datum Theme, Shopify Storefront Redesign | Liquid, Online Store 2.0, Shopify Search and Discovery, JavaScript | In production

- Twenty-fourth and current theme for creativeautomation.ae: redesigned homepage, mega menu, navbar, footer, collection subcategories, product listing pages and product page while keeping every existing link, integration and third-party app intact.
- Paired with a new Search and Discovery filter system on 120+ collection pages; followed launch with fixes to mega-menu logic, navigation hierarchy and product-page templates.

Vision Theme, Ground-Up Storefront Rebuild | Liquid, Online Store 2.0, JavaScript | Shipped 2026

- Twenty-third theme, rebuilt from scratch with a new grid, type scale, component set and information hierarchy for a catalogue of 200,000 parts and 451 product lines; live theme until succeeded by Datum.
- Part-number-first home lookup matching manufacturer part numbers, SKUs and titles; three-level mega menu with live counts; grid and dense list views on every collection; product page with enlarged specifications, pre-order lead times and pickup availability.

Shopify AI Chat Agent | Claude API, MCP, React Router, Prisma, PostgreSQL, Docker, Railway | In production

- Shopify Dev Dashboard app: theme app extension on the storefront, app proxy to a Dockerised React Router backend on Railway, OAuth session tokens rather than permanent admin tokens.
- Connects per session to Shopify Storefront and Customer MCP servers over JSON-RPC, discovers tools via tools/list, and streams Claude responses and tool results to the browser as typed SSE events; customer-scoped tools use a PKCE OAuth flow.

- Rebuilt catalogue search with broad-first querying, simplified-query retries, multi-level fallback, SKU exact-match ranking and vendor inference; constrained the agent to canonical product URLs, eliminating fabricated links.
- Added the TIA AI Product Search page: plain-language or part-number search, example prompts, saved parts lists and a linked chat with conversation history.

OTO Shipping Estimator | Node.js, Express, Railway | In production

- Express proxy between a Shopify cart and a carrier aggregator API; one public endpoint, with the refresh token held server-side, a cached access token refreshed proactively and a retry on mid-request 401/403.
- CORS allow-list, two tiers of rate limiting, short-TTL response cache, upstream timeouts with bounded retries and a credential-free mock mode for local development.

Catalogue Architecture, UAE and Saudi Storefronts | Shopify Liquid, metafields, Search and Discovery, Matrixify

- Metafield-driven parent and child collection hierarchy rendering 270+ collection pages and 120+ subcategories with no per-collection hardcoding; breadcrumbs auto-generate the deepest path with zero per-product setup.
- Metafield filters across 200+ collection pages, later moved to Shopify Search and Discovery on 120+ pages; imported approximately 40,000 products and corrected 4,974 broken image URLs.

Brand Landing Pages, IFM, Siemens and SMC | Shopify Liquid, page templates, Google Ads, SEO | Live

- Four quote-first landing pages, each with its own visual identity, built as page templates inside the storefront theme and receiving the company's paid search traffic; article-number-first cards, lead-time requests for items supplied to order, and enquiry by email or WhatsApp in place of a cart.

Tutorly, AI Study Platform | React, Python, LLM APIs, AWS S3 | Personal project

- Note generation, flashcards, quizzes, math solving, a doubt-chain assistant and an audio-recap pipeline built on AWS S3 and AssemblyAI. Live at gettutorly.vercel.app.

Forms.io, Form Builder | React, TypeScript, Supabase | Personal project

- Build, share and manage forms with live validation and response collection. Live at formsio.vercel.app.

Education

Bachelor of Computer Applications

Nitte Meenakshi Institute of Technology, Bengaluru | 2022 - 2025
